Foreword

The Guide for Strengthening Gender Equality and Inclusiveness in Teaching and Learning Materials in Asia was produced for the United States Agency for International Development (USAID) in 2017. The Guide was adapted for Asia from the Guide for Strengthening Gender Equality and Inclusiveness in Teaching and Learning Materials (USAID, 2015) that was developed as part of the Data for Education Research and Programming project with USAID’s Bureau for Africa.

In support of the Agency’s Education Strategy and Policy on Gender Equality and Female Empowerment, this Guide advances global efforts toward greater gender equality and inclusiveness in education by providing guidance on how to develop and evaluate materials that are free of bias and that promote equality and inclusiveness of all marginalized, disadvantaged, and underrepresented groups.
Acknowledgment

This version of the Guide was adapted from the original Guide for Strengthening Gender Equality and Inclusiveness in Teaching and Learning Materials (USAID, 2015). The authors would be remiss not to acknowledge the host of individuals and organizations that were instrumental in the development of the original.

The authors would like to thank the following individuals for the generous input and revision given during the development of the 2015 Guide: Paola Canales (USAID), Matthew Emry (USAID), Lubov Fajfer (USAID), Kalene Resler (USAID), Reverend Dr. Tomi Thomas (The Catholic Health Association for India), Helen Abadzi (University of Texas at Arlington), Ernestine Ngo Melha (UNICEF—Global partnership for children with disabilities, education task force), Emily Klinger (Special Olympics International), Bryson Childress (Special Olympics International), Annemarie Hill (Special Olympics International), Donald Wertlieb (Tufts University, Partnership for Early Childhood Development & Disability Rights), Sian Tesni (CBM International), and Candace Cable (CandaceCable.com). We would also like to thank USAID PRIORITAS and EGRP project teams and the participants in the 2015 Comparative International Education Society Conference who helped pilot the tool.
Introduction

Equal access to quality education for all children is an important part of the international discourse surrounding education. As more countries meet goals for providing access to education for the majority of their children, international focus is aptly shifting to making access equitable for all children and improving the quality of the education that is provided.\(^*\) Initiatives such as the Millennium Development Goals, Sustainable Development Goals (in particular, Goal 4), and the Dakar Framework for Action exemplify this shifting focus from academic access to academic quality, attempting to make explicit the interconnections between equitable and fully inclusive access to education and the quality of educational outcomes.

The World Conference on Education for All in Jomtien and the Salamanca Statement contributed to the conversation on providing inclusive education for persons with disabilities and provided a framework for action. The Dakar Framework for Action is also playing a lead role in expanding the discourse on areas of discrimination and stereotyping, shifting the focus in these areas from educational parity to the more ambitious and transformative agenda of achieving full educational equality and inclusiveness.

The U.S. Agency for International Development (USAID) shares this growing international concern for promoting educational experiences that are fair and respectful to all children, including children who are marginalized (e.g., due to sex and gender, disability, language, racial or ethnic and socioeconomic status) and children who are in conflict and unstable situations.\(^†\) In addition, USAID recognizes the role that equitable teaching and learning materials can play in overcoming social bias and stereotypes.

As the literature shows, much work still needs to be conducted to improve the implementation of equitable and inclusive teaching and learning materials.\(^*\) The Guide for Strengthening Gender Equality and Inclusiveness in Teaching and Learning Materials in Asia (henceforth referred to as the Guide) attempts to advance the global efforts toward greater gender equality and inclusiveness in education by providing guidance on how to develop and evaluate materials that are free of bias and that promote equality and inclusiveness of all marginalized, disadvantaged, and underrepresented groups.

The Power of Teaching and Learning Materials

Because school plays such a central role in the lives of most children and because a child’s experiences in school are centered around teaching and learning materials, the messages transmitted by such materials—whether explicitly or implicitly—can have a strong and lasting impact on a child’s attitudes and perceptions.

There are many ways in which education systems—and the broader social contexts in which they exist—can exclude and marginalize subpopulations of children. Education systems can also, however, help to break negative stereotypes. In one study of the impact of gender-biased teaching and learning materials,\(^1\) the researchers reported that exposing children in Grades 4, 7, and 11 to non-traditional gender roles in narratives led to increased acceptance among these children of men and women engaging in non-traditional roles. Similarly, another study\(^2\) on the effects of bias showed that exposing children in Grade 5 to gender-equitable roles led to more positive perceptions of gender roles and expectations for boys and girls. In addition, after exposure to gender-equitable roles, students acknowledged the importance of gender equality and the effects that gender stereotyping can have on people’s ambitions, interests, and behaviors.

Bias based on a child’s sex and gender is one obvious form of exclusion, and classroom teaching and learning materials can help to overcome this bias. Other equally pervasive forms of exclusion exist, whether they are based on the presence of a physical or mental

\(^†\) For more information, see USAID’s Checklist for Conflict Sensitivity in Education Programs. Available at http://www.usaid.gov/sites/default/files/documents/1865/USAID_Checklist_Conflict_Sensitivity_14FEB27_cm.pdf
disability; one’s socio-economic status, class, ethnic background, political orientation, sexual orientation, gender identity, or language; or any other factors that cause a sector of society to be undervalued and underrepresented in society, civic activities, and/or education.

In most societies, the presence of a disability can be the most marginalizing characteristic a child can face. In many societies, individuals with physical, cognitive, sensory, and/or multiple disabilities tend to be excluded from many social, civic, and even educational activities. This discrimination can be compounded when a child is at risk of being marginalized for additional factors, as well, such as her gender or class. Worldwide, between 10 and 15 percent of children aged 18 years and younger are born with a disability or become disabled as a child. However, in many countries, fewer than 10 percent of children with disabilities are enrolled in school. Where schooling options are available, they are typically segregated schools and can be too expensive or too far away for many families to access. In addition, existing materials often lack representations—much less positive portrayals—of students with disabilities.

Although the number of children with cognitive disabilities worldwide has been estimated at approximately 1 to 3 percent, cognitive disabilities in children can be difficult to identify; therefore, such disabilities often go unrecognized. Children with cognitive disabilities are often erroneously perceived in a negative light, and the stigma of cognitive disabilities poses barriers that make inclusion and participation in all spheres of life difficult. As a result, for many children living with cognitive disabilities, there is very little sensitivity about the potential that exists in such children and the need to support them in realizing this potential. Positive, non-stereotypical depictions of individuals with cognitive differences as productive members of society are severely lacking. However, such depictions are particularly important because they can raise awareness and sensitivity in the classroom and provide positive role models for such children.

In addition, within any given context—particularly in areas where multiple ethnic backgrounds, cultural customs, and languages co-exist—specific members of society can be marginalized and even discriminated against because of group affiliations. Children of such undervalued groups can feel underrepresented, misunderstood, and even invisible in social and educational arenas. Ensuring that teaching and learning materials intentionally represent members of all social groups in equally positive and contributing roles can go far in helping to weaken biases and stereotypes of this nature.

Teaching and learning materials play a central role in either perpetuating or transforming stereotypes. Through negative and often outdated stereotypes in teaching and learning materials, members of disenfranchised social groups (e.g., girls, children with disabilities, or ethnic and language minorities) are not depicted as powerful or central role models. Similarly, if members of privileged groups (e.g., boys or ethnic and language majorities) only see themselves depicted in specific occupations or in narrowly defined roles (e.g., occupational, but not familial roles), then this also limits their aspirations and future opportunities.

Because classroom teaching and learning materials have the power to either maintain the status quo in a society—thereby reinforcing stereotypes found outside the school—or transform them, more frequent and positive portrayals of characters from different groups can spur change by empowering individuals to see themselves and others in more positive and inclusive ways.

Definitions

Definitions and uses of terminology can vary; therefore, for the purposes of this guide, the following definitions are used.

Disability. Long-term physical, mental, intellectual, and/or sensory impairments, which, in interaction with various barriers, may hinder full and effective participation in society on an equal basis with others.

Gender. The socially defined set of roles, rights, responsibilities, entitlements, and obligations of girls and women and of boys and men in societies. The social definitions of what it means to be girls and women or boys and men vary among cultures and change over time.
Gender Equality. Gender equality concerns women and men, and it involves working with men and boys, women and girls, to bring about changes in attitudes, behaviors, roles, and responsibilities at home, in the workplace, and in the community. Genuine equality means more than parity in numbers or laws on the books; it means expanding freedoms and improving overall quality of life so that equality is achieved without sacrificing gains for men or women.4

Gender Identity. A person’s deeply felt internal and individual experience of gender, which may or may not correspond with the sex assigned at birth. For transgender people, their birth-assigned sex and their own internal sense of gender identity do not match.4

Inclusion. A process of addressing and responding to the diversity of needs of all learners through increasing participation in learning, cultures, and communities and reducing exclusion within and from education. Inclusion involves changes and modifications in content, approaches, structures, and strategies, with a common vision and a conviction that it is the responsibility of the education system to educate all children equally.5

Inclusive Education. A process of strengthening the capacity of the education system to reach out to all learners equitably and can thus be understood as a key strategy to achieve education for all. As an overall principle, inclusive education should guide all education policies and practices, starting from the fact that education is a basic human right and the foundation for a more just and equal society.5

Sex. The classification of people as boys or men or as girls or women. At birth, infants are assigned a sex based on a combination of bodily characteristics, including chromosomes, hormones, internal reproductive organs, and genitalia.4

Universal Design for Learning. A framework for curriculum development in which materials are designed to allow all individuals equal opportunities to learn. The curriculum materials should be adapted to accommodate individual learning differences rather than using the same materials, teaching methods, or assessments for all learners.6

The Structure of This Guide
The purpose of this guide is to provide guidance on how to represent members of all subgroups of a society in teaching and learning materials in equitable and non-stereotypical ways. Reviewers can use the strategies proposed in this guide to evaluate existing teaching and learning materials across primary and secondary levels. Authors, illustrators, or developers can employ the strategies to inform the development of new materials.

This guide is organized according to themes that emerged from the review of relevant literature. Each theme reflects a particular type of bias that should be considered when evaluating or developing teaching and learning materials.

The four themes discussed in this guide are as follows:

- Equal frequency of representation (e.g., proportionate frequency of the representation in text of one group as compared to another)
- Gender equitable and inclusive illustrations (e.g., the representation of non-stereotypical character traits in text illustrations)
- Gender equitable and inclusive language (e.g., the use of alternating pronouns [“he” or “she”] to identify a character whose sex is unknown)
- Gender equitable and transformational roles (e.g., the variety and types of occupations attributed to one group versus another).

For each theme, a brief summary of existing literature is presented. This guide also includes explanations of considerations related to the type of bias, examples of bias-free representations, and checklists that can be used to evaluate existing materials for each type of bias. Included in this guide are tools for evaluating teaching and learning materials for equality and inclusiveness (see Annexes 1 through 3). Throughout this guide, it is assumed all materials will be designed using a universal design for learning (UDL) approach; specific guidance regarding universal design is not, therefore, incorporated into this guide.6
Theme 1. Equal Frequency of Representation

What Issues Do We Face?
Throughout most cultures, specific subgroups (e.g., boys and men, members of a dominant racial or ethnic group, or those with certain physical or emotional characteristics) are represented in teaching and learning materials much more frequently than others (e.g., girls and women, members of a minority racial or ethnic group). For example, studies revealed the following statistics:

- Approximately 15 percent of the world population has some form of disability, and yet it is rare to see a child with a disability represented in teaching and learning materials.
- In New Zealand, women in children's early reading materials were represented as mothers, cooks, and caregivers, whereas men were represented in a wider range of roles and with occupations.
- In Australia and Hong Kong, men and boys were represented more than women and girls in children's books, despite women's outnumbering men in both countries.

What Are the Consequences?
The characters represented in teaching and learning materials can be powerful role models for children. Students are most likely to identify with characters in books if those characters are similar to them—whether they are the same nationality, speak the same language, are the same sex, or have the same physical characteristics. If, in teaching and learning materials, a child does not see characters with whom he or she can identify—whether by language, ethnic group, sex, or other physical characteristics—then the child is likely to learn the implicit, but strong, message that he or she is less important than others or has less opportunity to be who he or she wants to be. Ensuring the equal representation of children in teaching and learning materials can help expose children to positive messages and provide powerful role models.

How to Develop Gender Equitable and Inclusive Materials
The characters in teaching and learning materials should accurately reflect the demographics of the specific society in which students will use them. Most societies are made up of approximately 50 percent girls and women and 50 percent boys and men; therefore, the characters in teaching and learning materials should reflect this distribution. In contexts where multiple languages are spoken and ethnic groups are present, characters in teaching and learning materials should reflect the distribution of these languages and ethnicities that exists in the broader social context. Because all societies include individuals with various physical, cognitive, and sensory disabilities, characters facing these issues in books should reflect these differences in positive and inclusive ways. In areas where social or political conflicts have resulted in widespread physical violence, characters can be used to sensitively and contextually appropriately address this reality and serve as role models for how to handle resulting trauma.

Given the prevalence of inequality in many aspects of society, ensuring equal representation in teaching and learning materials will take conscious effort and planning. When developing these materials, thought should be given to many considerations to ensure equitable representation of all groups including the following.

Frequency of characters from different subgroups in society
- Characters from different subgroups in society should appear with the same proportional frequency as they do in the population. For example, on average, 15 percent of people worldwide have a disability. Therefore, approximately 1 out of 7 characters in the stories and images should be children or adults with a physical or cognitive disability. Similarly, there should be a proportional representation of children and adults related to the ethnic and religious makeup of the country or region within a country.
**Frequency of female and male characters**

- In teaching and learning materials, female and male characters should appear with equal frequency. Although a particular story may be focused on a male or female character, there should be equal representation of both genders across all stories and text in materials.

**Naming of male and female characters**

- If some characters are not identified and do not have names, those characters should be equally representative of each sex. The majority of unnamed characters should not be predominately one sex.

---

**BIAS-FREE EXAMPLES**

**Gender-Equitable Story Titles**

- Aditi and Her Math Test
- The Fox in the Box
- Nani and His Hat
- The Blue Whale
- Pran and His Pet
- The Dog in the Well
- Manju and Her Drum

**Include characters from different ethnic or religious groups in stories.**

**Sap Has a Mat**

- Sap has a mat.
- Sap has a fat cat.
- Sap said, “Sup, sit here.”
- Sap said, “Fat cat, sit here.”
- Sup sat.
- The fat cat sat.

---

**The big sad frog**

Once upon a time, there was a sad frog who lived by a pond. She was sad because she was lonely. She wanted to be friends with the bees and the butterflies. The bees and the butterflies who lived by the pond were afraid she would eat them. They would not fly by. One day a new butterfly flew to the pond. The sad frog said, “Do not be afraid! I will not eat you!” The new butterfly flew closer. The new butterfly landed by the frog. The frog was no longer sad.
Theme 2. Gender Equitable and Inclusive Illustrations

What Issues Do We Face?
Illustrations have an even higher profile than text in teaching and learning materials because of their relative size on a page, their frequency, and their relative attractiveness for children and for illiterate children or emerging readers (especially if the illustrations appear in color).

A study of English language textbooks in Australia found that male characters were more often represented than female characters in illustrations (i.e., 57.5 percent for male versus 42.5 percent for female characters).9 Similar reviews of Romanian10 and Turkish11 textbooks also found male characters to be more frequently represented than female characters in illustrations, particularly in textbooks for higher grades. Illustrations also tended to portray gender stereotypes. In Turkey, for example, 13 percent of the male characters were illustrated in roles of authority (e.g., an executive, a decision maker, an inspector), compared with only 4 percent of female characters.11 Additionally, characters with disabilities are underrepresented. A study of 500 award-winning books in the United States found only 2 percent of books reviewed included characters with disabilities. Of those 10 books, only 6 featured a main character with a disability.12 When characters with disabilities are featured in texts, a majority of the time they are portrayed with negative stereotypes (e.g., a burden, unable to fully participate in everyday life).12

In these materials, even illustrations of posture can be used to communicate different expectations for different subgroups. A study of early grade readers in New Zealand found that girls and women were often shown seated with their legs crossed or bent over talking to a child, which can be viewed as positions of subservience and/or vulnerability. However, boys and men were shown with one foot resting on an object or sitting with both feet on the ground, which are both positions of power and confidence.8

What Are the Consequences?
As with all types of stereotyping, biased and other stereotypical portrayals of characters in illustrations perpetuate notions of roles that are narrow and restrictive. Such illustrations do not acknowledge or encourage a range of activities or interactions between or among members of different subgroups, much less challenge social norms. Additionally, the impact of illustrations can be even greater than that of text, particularly on young children, because illustrations are so prevalent in young children's materials and illustrations are, by design, much more visible and attractive than text.

How to Develop Gender Equitable and Inclusive Materials
When teaching and learning materials are being developed, thought should be given to the following considerations to avoid stereotyping in illustrations.

Size and placement
Illustrations of characters representing all social subgroups should be of the same size and should appear with approximately equal frequency. The characters should also appear in similar roles.

More specifically related to one's sex, female and male characters should appear in open and enclosed places with approximately equal frequency (e.g., both in the house or classroom, both outside in the village or field).

Inclusiveness
Approximately 15 percent of illustrations should be of characters with disabilities, ideally with a range of types of disabilities portrayed (e.g., individuals with mild to severe physical disabilities).

Illustrations should proportionally represent characters from different ethnic and religious groups and from both rural and urban settings.
BIAS-FREE EXAMPLES

Portray female characters engaging in activities that are usually restricted to boys.

Portray characters from different ethnic or religious groups.

Include illustrations depicting female and male characters in comparable roles.

Depict male and female characters appearing in open, as well as closed, spaces.

Include characters from marginalized groups in stories.
Theme 3. Gender Equitable and Inclusive Language

What Issues Do We Face?
Historically, and within many languages that use gendered pronouns, the pronouns “he” or “him” are used to refer to boys and men, specifically. These words are also generically used to refer to an individual when the sex of a given person is unknown and are often used to refer to mixed-sex groups. Using a male pronoun to refer to mixed-sex groups can be convenient, but this can have a negative impact on girls and women. Using a male pronoun generically in texts implicitly attributes greater importance to boys and men, which is a message that both girls and boys can internalize at young ages.

Additionally, people with disabilities have historically been identified in negative ways. Most of the language used places the disability before the person (e.g., a deaf person, a handicapped child). However, this practice causes readers to focus on the label, the disability, and not the person as an individual.

What Are the Consequences?
Similar to the prevalence of depictions of different groups, the language used to refer to characters in teaching and learning materials can have a subtle but strong impact on children. Using gender exclusive language (e.g., using male identifiers to refer to a population of individuals that may include female, as well as male, characters) limits the ways in which girls and women view themselves and the opportunities that can be open to them. Using negative stereotypes or language that places children’s primary focus on a person’s disability can also shape the way in which children view disabilities within society. Referring to individuals with disabilities by using the word “disabled” before anything else (e.g., “disabled children” instead of “children with disabilities”) places a generic label onto a person, causing readers to view those with disabilities as a homogenous group. Focusing first on the disability rather than on the person brings to light a person’s limitations instead of his or her identity and capabilities.

How to Develop Gender Equitable and Inclusive Materials
When teaching and learning materials are being developed, thought should be given to the following considerations to avoid stereotyping in language. It is important to note that the use of gender in nouns or pronouns is language specific depending on the language’s pronoun system and how gender is or is not encoded in that system. Examples that follow assume a language that does encode gender in its pronoun system.

Use of nonrestrictive gender pronouns
• When speaking about a non-gender-specific character, the use of “he” or “she” or “him” and “her” should be alternated rather than consistently using male pronouns.
• When speaking about a particular character, the appropriate personal pronoun should be consistently used to refer to that character (i.e., “she” or “he”).
• When specific groups are mentioned, appropriate masculine and feminine forms of roles (e.g., sportsmen, sportswomen, postmen, postwomen) should be used.
• The neutral form of a title and function should be used when possible (e.g., chairperson, rather than chairman).

Use of “relational” definitions
• If female characters are identified by familial relationships, then male characters should be identified in the same manner. If male characters are identified by broader social roles, then female characters should be identified in the same manner. For example, if a female character is referred to as “the aunt,” then the male character should be called “the uncle.” Conversely, if a male character is called “a teacher,” then the female character should also be referred to in an occupational role, such as “the Principal,” or “the farmer.”
Use of "person-first" language
- Language used to describe individuals with disabilities should promote a positive image of the person and not use any negative stereotypes or labels.

- When people with disabilities are mentioned, “person-first” language should be used (i.e., “a girl who is blind” instead of “a blind girl”).

**BIAS-FREE EXAMPLES**

**Use a female pronoun—or alternate between female and male pronouns—when a character’s sex is unknown.**

**Use the appropriate role such as “woman” instead of “mother” and “council member” instead of “councilman.”**

**Gender-Neutral Language:**
- “When a student asks a question, answer her clearly.”
- “The woman went to the city to meet with the council member.”

**Make unnamed characters both female and male.**

**Use neutral forms of titles and functions.**

**News of the Day**

May 2017  Serving the Youth of Today

**Driver Beware**

Yesterday, there was an accident at Colombo. A bus tried to pass a car. It crashed into a tree. Luckily, nobody was sitting under the tree. But the tree was damaged. A policeperson came there and said, “Everyone should be careful when driving!”

Baby wants to play in the sand. She puts sand on her legs. She puts sand on her arms. She puts sand in her hair. She is very happy.

Then her father sees her. He says, “Baby, baby, you are dirty!” He gives her a bath. He puts a clean dress on her.

Illustration: Ujwal Tamang
Theme 4. Gender Equitable and Transformational Roles

What Issues Do We Face?
Findings from a range of textbook analyses indicate that members of one social subgroup are often portrayed more positively than others. For example, in most contexts, girls and women are represented almost exclusively in home-based or reproductive roles (e.g., sewing, cooking, weaving, cleaning the home, taking care of the children). In addition, girls and women are rarely represented as members of the paid workforce, and women are inadequately represented in history books, mathematics and science materials, and civic education student books as leaders and contributors to their societies. In contrast, boys and men are usually represented in more socially productive roles (e.g., doctors, farmers, policemen, community leaders). Boys and men are also usually represented as participating more in outdoor and physical activities and engaging more in the broader community. This trend is also often observed with other social subgroups, whether they are subgroups based on ethnic and language affiliation, the presence of a disability, or other characteristics. An analysis\textsuperscript{13} of roles of characters with disabilities in text and illustrations reveals that people who are considered to have a physical disability or chronic illness, or those who do not follow the mainstream society, are represented as having negative behaviors. These biased and possibly discriminating representations can perpetuate stereotypes that do not accurately depict individuals’ personality characteristics, skills, levels of participation in the labor force, or contributions to society.

What Are the Consequences?
By perpetuating outdated stereotypes in teaching and learning materials, members of other marginalized groups are deprived of valuable role models; therefore, they are subtly discouraged from envisioning themselves in more powerful or valued roles. Similarly, if boys and members of privileged groups only see themselves depicted in specific occupations or in narrow roles, such as “fathers,” then this also limits their aspirations and future opportunities. Furthermore, depictions of only traditional occupations in teaching and learning materials help to maintain negative attitudes toward women and members of other subordinate and privileged groups who try to break out of these patterns. Although teaching and learning materials have the power to reinforce stereotypes found outside the school, they also have the power to transform them and give children greater options that are not constrained by narrowly defined gender norms or disability.

How to Develop Gender Equitable and Inclusive Materials
When developing teaching and learning materials, thought should be given to the following to ensure that representations for characters are a balanced reflection of traditional and non-traditional gender and social roles.

Interpersonal relations
- Relationships between girls and boys and women and men, as well as those with and without disabilities, should be presented as equal, with mutual respect, with all characters participating in decisions and activities and exercising both traditional and non-traditional roles (e.g., a father caring for an infant) to promote collaboration and cooperation.
- In materials, characters representing all social subgroups (e.g., characters with disabilities, male and female characters, members of all ethnicities) should be portrayed with proportional frequency in leading and supporting roles (e.g., observing, participating, leading, watching, and assisting).
- Particularly in contexts in which ethnic, language, or other cultural tensions may exist, illustrations should portray members from each social group interacting in harmonious and mutually beneficial ways.
Activities

- Characters representing all subgroups should be represented in all typical areas of activities with proportional frequency. These activities include education (e.g., classroom, homework, experiments), leisure (e.g., sports, recreational activities), and chores or responsibilities (e.g., caring for siblings, getting water, cleaning).
- Characters representing all subgroups should be portrayed with proportional frequency as engaging in indoor and outdoor activities.
- Characters with disabilities should be portrayed as having a wide range of personal traits, interests, and occupations (e.g., a leader, a lawyer, athletic).
- Characters representing all subgroups should be shown in non-traditional and traditional occupations (e.g., female truck driver, male nurse).
- Characters should depict a range of ethnicities, characteristics, and abilities. All characters should be portrayed as having a range of intellectual abilities and potential and as achieving various academic, intellectual, social, and personal goals.

BIAS-FREE EXAMPLES

- Use a girl or woman as a central character to balance stories in which a boy or man is the central character.
- Portray a character with a disability in an active and participatory role.
- Portray male and female characters as having comparable skills, knowledge, and accomplishments.
- Portray a person with a disability in a role typically attributed to those without disabilities.

Annexes

Annex 1. Instructions for Completing the Worksheet

Annex 2. Sample Worksheets

- Worksheet for Evaluating Teaching and Learning Materials for Gender Equality and Inclusiveness

Annex 3. Checklist for Evaluating Teaching and Learning Materials for Gender Equality and Inclusiveness
Annex 1. Instructions for Completing the Worksheet

For each statement on the sample worksheet (see Annex 2), place a tick mark (tally) in the appropriate box. Refer to the respective pages within the guide for an explanation and/or example of each question in the worksheet. Be sure to read the text in each of the boxes on the worksheet. When all tick marks have been made, within each box indicate the total number of tick marks.

For most statements, overall ratings can be calculated by using the following steps. In some cases, however, the calculations vary to address the unique nature of each criterion; therefore, take care to review the calculations proposed for each criterion to ensure that the proper steps are followed. These steps assume that in the population there are equal numbers of female and male citizens (50 percent of each).

1. Add the total tick marks from the “Female Representations” cell and the “Male Representations” cell. Enter this total as (A): the “total tick marks.”

2. Divide the total tick marks from the “Female Representations” cell by (A): the “total female tick marks” ÷ A. Convert the resulting decimal into a percentage by moving the decimal two places to the right. To get a percentage that is a whole number, round up for numbers 0.5 and above or round down for numbers below 0.5. Enter this total as (B): the “total female tick marks” ÷ A.

3. Divide the total tick marks from the “Male Representations” cell by (A): the “total male tick marks” ÷ A. Convert the resulting decimal into a percentage by moving the decimal two places to the right. To get a percentage that is a whole number, round up for numbers 0.5 and above or round down for numbers below 0.5. Enter this total as (C): the “total male tick marks” ÷ A.

4. Subtract C from B. Disregard any resulting negative sign; what is important is the difference in percentages, not whether the difference is positive or negative.

5. If (D) is less than or equal to 10%, then assign 2 points for this criterion. If (D) equals between 11% and 20%, then assign 1 point for this criterion. If (D) is greater than 20%, then assign 0 points for this criterion.

The following table presents an example of how to complete the worksheet to determine the rating. For this example, assume a story in which two girls are walking to school together. The girls see a total of five friends on the way to school, one boy and four girls. There are six tick marks for female characters, and one tick mark for the male character.

As you work through the worksheets, some questions may be encountered that are not appropriate (N/A). Note these questions as “N/A.” Also keep in mind that this Guide does not address issues such as the overall message, the interest level, or potential pedagogical uses of materials. As you calculate your ratings, consider what the ratings tell you about the materials, while also considering the value of the materials holistically. Following the worksheets are some questions that can help to guide discussions about the overall utility of these materials and how they can be used in your context.

## Theme 2 Worksheet. Gender Equitable and Inclusive Illustrations

### Questions

#### A. Make a tick mark (tally) for each character in each illustration (to determine frequencies of representations).

- Make a tick mark if the character is a girl or woman.
- Make a tick mark if the character is a boy or man.

  - Total "female" tick marks: __
  - Total "male" tick marks: __

- Make a tick mark if the sex of the character is not known or if gender-neutral terminology is used.

  - Total "neutral" tick marks: __

- Make a tick mark if the total tick marks: (A)

- Total "female" tick marks ÷ A: % (B)

- Total "male" tick marks ÷ A: % (C)

  - B − C = D
  - D = ≤10%: Assign 2 points
  - D = 11% to 20%: Assign 1 point
  - D = >20%: Assign 0 points

- Circle the overall rating: 2 points, 1 point, or 0 points

#### B. Make a tick mark (tally) for each character in each illustration (to determine frequencies of representations of characters with disabilities).

- Make a tick mark if the character has a disability.
- Make a tick mark if the character does not have a disability.

  - Total "has a disability" tick marks: __
  - Total "does not have a disability" tick marks: __

- Total tick marks: (A)

- Total "disability" tick marks ÷ A: % (B)

  - B = Proportional to presence in culture: Assign 1 point
  - B = Not proportional to presence in culture: Assign 0 points

- Circle the overall rating: 1 point or 0 points

#### C. Make a tick mark (tally) for each character in each illustration (to determine frequencies of representation of characters from different ethnic or religious groups).

- Make a tick mark if the character is from a dominant ethnic or religious group.
- Make a tick mark if the character is from a non-dominant ethnic or religious group.

  - Total "dominant group" tick marks: __
  - Total "non-dominant group" tick marks: __

- Make a tick mark if the character is portrayed in a way that makes it impossible to determine the character’s ethnic background or religious affiliation.

  - Total "neutral" tick marks: __

- Total tick marks: (A)

- Total "Group 1" tick marks ÷ A: % (B)

  - B = Proportional to presence in culture: Assign 1 point
  - B = Not proportional to presence in culture: Assign 0 points

- Circle the overall rating: 1 point or 0 points

#### Gender Equitable and Transformational Roles subtotal

#### Themes total number of ACTUAL points

---

**Step 1. Circle your total number of POSSIBLE points**

If you do not have any N/A ratings in Theme 3, your total number of POSSIBLE points is 28.

- If you have 1 N/A rating in Theme 3, your total number of POSSIBLE points is 26.
- If you have 2 N/A ratings in Theme 3, your total number of POSSIBLE points is 24.
- If you have 3 N/A ratings in Theme 3, your total number of POSSIBLE points is 22.

**Step 2. Add up your total number of ACTUAL points**

If your total number of ACTUAL points equal your total number of POSSIBLE points, then **congratulations, these materials are relatively bias free.** They will be good resources in your classroom or school.

If your total number of ACTUAL points is within 4 points of your total number of POSSIBLE points, then **these materials are fairly bias free, but could be improved in important ways.**

If your total number of ACTUAL points is 5 or more points lower than your total number of POSSIBLE points, then **these materials should be revised to better promote equality and inclusiveness.**
Step 3. General Reflection

A. Looking more holistically at the materials, is the overall theme or message of the materials positive and constructive? Is there pedagogical value in the materials (for instance, if this is a folktale, does it offer an instructional message)?

B. Do your holistic perceptions of the materials match your tallies? If there is a discrepancy, why? If the materials are valuable but do not score well on gender equality and inclusion, how can the materials be revised and improved?

C. Given what you now know of these materials, do they have a place in your school, classroom, or other context? If so, how can they be positively and constructively used?
